Problem Statement

There is a list of N values that were inserted into a stack and a list of M values that were inserted into a queue. You need to determine whether the stack and queue are the same or not based on the order in which the elements are removed.

Note: You need to solve it using *STL* Stack and Queue only.

Input Format

- First line will contain N and M .
- Second line will contain stack A with N values.
- Third line will contain queue B with M values.

Constraints

1. $1 \leq N, M \leq 10^6$
2. $0 \leq \text{Values} \leq 1000$

Output Format

- Output YES if they were same, otherwise NO.

Sample Input 0

```
5 5
10 20 30 40 50
50 40 30 20 10
```

Sample Output 0

```
YES
```

Sample Input 1

```
4 4
10 20 30 40
10 20 30 40
```

Sample Output 1

```
NO
```

Sample Input 2

```
5 4
1 2 3 4 5
5 4 3 2
```

Sample Output 2

NO
